

“Gideon was my first manager after moving to London. Left an impressive example of boss who can lead the team in direction company needs, giving the people field to take an independent actions, encouraging to resolve problems creatively at the same time. He's always been very friendly and available to reach whenever that was needed. Too modest for the job he's doing”

Pawel Uramowski

QA Automation Engineer Hailo and Yoti

“I worked closely with Gideon at Yoti.com. where he was instrumental in the early phases of maturing Yoti's operational capabilities in addition to his role as Head of QA. with responsibility for setting out QA and performance testing strategies. He often went above and beyond to contribute to continuous improvement and performance enhancing initiatives, providing insightful input and alternative perspectives into product development challenges. Gideon's experience is of a high calibre, he is very personable, and I enjoyed working with him, I'm happy to recommend and happy to work with him in future.”

Alex Learmonth

Head of Product Delivery Yoti

“Gideon is a modest and honest professional who demonstrates great leadership skills. The MagenTys team thoroughly enjoyed working with and for Gideon in what is one of the fastest growing QA teams we have worked in. He has a good business head and can effectively translate technical expertise into business benefits.”

Liam McDowell

Strategic Vision & Commercial @MagenTys

Gideon Gluckman

SQA Leader

Gideon Gluckman is an internationally experienced software engineering professional with a focus on Quality Assurance, Agile Transformation and Team Building. He brings an empirical and pragmatic approach to solving problems in any of these domains, combining technical knowledge with communication and managerial skills.

TRANSFORMATION

- Built the QA and Support functions for Hailo a successful Mobile Taxi startup from pre-launch into an international business operating on three continent.
- Implemented Agile Testing Methods in two successful startups producing native iOS and Android Mobile Applications running against both cloud-based and co-located microservice stacks
- Scaled multiple QA teams from single practitioners up to as many 24 reports focussing on simplicity, agility and automation
- Implemented a bespoke QA automation framework utilizing Gherkin, Cucumber, Selenium and Calabash to allow end-to-end testing of the entire Hailo Product Stack within a single test process to deliver acceptance/regression testing across multiple scrum teams and products

DELIVERY

- Produced and managed the QA and release processes to allow parallel semi-weekly releases of four mobile apps, and more than 200 microservices across seven interdependent scrum teams.
- Designed and managed the alpha, beta and public releases of multiple mobile, web and back-end products including technical release processes, communications and feedback
- Created and utilised web, desktop and mobile QA Automation frameworks in multiple organisations

Key Experience

- Lead Tester EMBLEM, EMB Actuarial Consultancy 2007-2010
- Head of QA, Hailo LLC 2011-2015
- Head of QA, Yoti LLC 2015-2016
